Acidity of Pyrrole and Indole Pyrrole and indole are weak acids. With p K a values of about 17.5, pyrrole and indole are about as acidic as alcohols and about 15 $\hat{\text{c}}$ 17 pK a units more acidic than primary and secondary amines (Sec. 23.5D). The greater acidity of pyrroles and indoles is a consequence of the resonance stabilization ...

Heterocyclic chemistry is the branch of organic chemistry dealing with the synthesis, properties, and applications of these heterocycles.. Examples of heterocyclic compounds include all of the nucleic acids, the majority of drugs, most biomass (cellulose ...

Wed, 05 Dec 2018 00:39:00 GMT Heterocyclic compound - Wikipedia - Imidazoline is a class of heterocycles formally derived from imidazoles by the reduction of one of the two double bonds. Three isomers are known, 2-imidazolines,

3-imidazolines, and 4-imidazolines. The 2- and 3-imidazolines contain an imine center, whereas the 4-imidazolines contain an alkene group. The 2-Imidazoline group occurs in several drugs.
